

# Soundsory Home Listening Program.

Soundsory® is a Multi-Sensory, Home-Based Program. Soundsory targets our motor and cognitive abilities with a multi-sensory music program. It combines rhythmic music played on a patented headset. The program was designed by Tomatis® Method experts for children and adults who want to sharpen their minds and bodies.

By stimulating the ear's hearing and balance systems, Soundsory activates countless brain connections. Together, the ear and brain are retrained to process sensory information more quickly and accurately for better balance, coordination, and motor skills.

Just turn the headphones on, hit play, and listen to tracks such as:

- Playful nursery rhymes and marching songs
- Selected classics from Bach, Haydn, and Strauss
- Vibrant Latin, gospel, and jazz tunes.

A patented dynamic filter makes the higher-pitched sounds crisper while softening lower pitches. Combined with tempo changes from song to song, Soundsory stimulates our hearing and balance systems. This challenges the brain and helps form neural connections. Suitable from age 3 to elderly.

Soundsory is a 40 day program of daily 30 minutes of music listening. You can repeat the full program whenever you want.

You can rent a headset, contact for full details: [info@childrenstherapy.online](mailto:info@childrenstherapy.online)

Or purchase your own from using code 3A9906227 for a 10% discount:
