

# Right Eye Assessment

Right Eye is the worlds first eye tracking solution for general health and wellbeing. Using revolutionary eye tracking technology we are able to get a "window into Brain function". It's designed to quickly, easily and accurately expose vision and brain health in ways impossible with standard eye tests.

Built on the FDA-cleared RightEye Vision System™ and backed by over 30 years of science, RightEye tracks eye movement to help us understand the function of the nervous system.

Vision is more than 20/20 eyesight. Without vision, our balance, hand-eye coordination, reading comprehension, ability to drive, catch a ball—it's all compromised. RightEye is an opportunity for clients to transform how they lead their lives and all it takes is minutes.

The RightEye reports can be used to inform support but also as evidence for EHCP.

Suitable for both children and adults.

Completed by an experienced Child Therapist/Clinical Social Worker.

This is not a vision test, if we have concerns about this we refer to an optometrist.
