

Trauma Symptoms Checklist

The Trauma Symptom Checklist for Children (TSCC™) is a self-report measure of 'post-traumatic distress and related psychological symptomatology' in children and adolescents aged 8 - 16 years. It is useful in the evaluation of children who have experienced traumatic events.

The TSCC measures severity of post traumatic stress and related psychological symptomatology (anxiety, depression, anger, dissociation) in children.

The checklist can be used as part of a specialist assessment.

Completed by an experienced Child Therapist/Clinical Social Worker.
