

Irlen Screening Assessment

Irlen Syndrome is a neurologically based visual-perceptual disorder with a variety of symptoms including light sensitivity, poor academic achievement, difficulties with reading, poor attention and concentration, discomfort and/or fatigue, headaches, and poor depth perception. If you think your child has Irlen Syndrome, our trained Irlen screener can provide you with an evaluation and a program that can help improve the processing of visual information.

What Exactly Is Irlen Syndrome?

Irlen Syndrome, also known as Scotopic Sensitivity Syndrome, is present when the brain can not process visual information properly. This can make letters and words on a page appear to move or shift. Irlen Syndrome can create a barrier to learning and performing and affects people in a variety of ways. It can also present itself differently in different individuals. Some of the symptoms of Irlen Syndrome include:

- Eye Strain
- Difficulty With Reading
- Headaches
- Poor Depth-Perception
- Fatigue
- Print Looks Different
- Difficulty With Math, Music & Handwriting
- Low Motivation
- "Behaviour Problems"
- Attention Deficit
